

The Electric Power Research Institute, Inc. (EPRI), is an American independent, nonprofit organization that conducts research and development related to the generation, delivery, and use of electricity, including reliability, efficiency, affordability, health, safety, and the environment. This is the major research arm for all the utility companies in America.

On 1/23/2020, an EPRI conference in Phoenix ended and 21 utility engineers, managers, and specialists from all of the U.S. came for a tour of the AEM plant and specifically the solar reefer product. Several were excited to have AEM apply for grants in their individual states so that the solar reefers and infrastructure improvements at food distribution centers could be introduced.
